From: ncar!ASTRO.dnet.ge.com!CARR
Subject: Phobos/Deimos Densities
Date: 8 Oct 91 20:00:51 GMT

From: Paul Carr <CARR@ASTRO.dnet.ge.com>

There was recently a quote from R. Hoagland stating that the moons of Mars are hollow. I decided to inquire of them who know their planetary astronomy stuff, and received the following message from Dr. VanFlandern on CI\$. I have some other files by this same scientist if anyone is interested - he has put forward some alternative cosmological ideas which may interest paranet subscribers.

#: 92083 S4/The Solar System
08-Oct-91 00:07:49
Sb: #92057-Martian Moons
Fm: Tom VanFlandern/DC 71107,2320
To: Paul Carr 72537,2312

Paul,

Phobos: mass = 9.5×10^{18} grams; mean radius = 1.2×10^6 centimeters; mean density = 1.3 g/cc.

Deimos: mass = 2.0×10^{18} grams; mean radius = 7.5×10^5 centimeters; mean density = 1.1 g/cc.

[These figures from 'The Planetary System', publication AS419 of the Astronomical Society of the Pacific.]

The shapes are very irregular; and more careful solutions using actual shapes suggest slightly higher mean density figures. The densities are believed to be only about half those of normal asteroids because these moons were apparently struck so violently in an ancient collision that they were literally blown apart. The major fragments then fell back in place under the force of the moons' own gravity, but were then less densely packed. A huge crater and stress fractures ('grooves') visible on Phobos bear witness to this history.

Although these densities are low, they are not at all extraordinary. Some icy planetary moons in the outer solar system, and the planet Saturn itself, have lower densities. There is no suggestion of 'hollowness' in these figures.

There is an old theory that Phobos might be 'hollow' or artificial. It was based in part on the high rate of tidal acceleration of Phobos in its orbit, the origin of which is now better understood from tidal theory than it was earlier in this century. It was also based on a few old observations of questionable accuracy which tended to suggest that the acceleration of Phobos in its orbit had changed since its discovery, which could presumably only happen if it was hollow or artificial and had been struck or propelled. It is now widely believed that those very old observations had systematic errors in them, since the moons were barely visible at all in the glare of Martian light.
-|Tom|-

Hi John!

Yes, I've read a bit about old Fred Bell, too. He makes all kinds of outlandish claims: that he began his science career at age 9 (it probably was an ANT FARM!); that he worked with Werner von Braun. I think the guy is a sleeze bag. IMHO! IMHO!!

Did you know, ncar!ecn. our man Lush said to All on 03 Oct 91 11:53:58

n> But her third prediction was so horrifying that Lucia kept it to
n> herself until the Vatican finally ordered her to put it on paper
n> and swore her to secrecy in 1943.

And that is where it should have stayed. To even suggest that 'an image' of Virgin Mary would make ANY reference to the existence or acceptance of authority to any one or thing called, 'Satan' is beyond credible belief. It condemns the visioner to scorn and ridicule, except for those promoting such nonsense. They eat it up.

n> 'A great plague will befall mankind in 1993. Nowhere in the world
n> will there be order, and Satan will rule the highest places,
n> determining the way of things.

<< Laughing and spraying bits of oreo cookie over monitor. >>

n> 'Satan will even succeed in asserting himself at the top of the church.
n> 'He will succeed in seducing the spirits of the great scientists who
n> invent arms, with which it will be possible to destroy a very large
n> part of humanity in a few minutes.

Gee..isn't he a little late? We've had such things for decades!

n> 'Satan will walk in their midst, and in Rome there will be great
n> changes. The church will be darkened, and the world will be shaking
n> with terror.
n> 'A huge war will erupt. Fire and smoke will fall down from the sky.

Aren't they mixing their Hopi predictions up a bit too much?

n> 'The waters of the ocean will become mist, and the foam will rise to
n> tremendous heights and everyone will drown.
n> the crazed and the followers of Satan, who will then and only then
n> rule the world.
n>
n> 'At the last, those who survive will at every chance newly proclaim
n> God and His glory and they will serve Him as when the world was
n> not so perverted.

Methinks the young 'seer' has been into the cooking sherry with that one!
If that is the future of our world...PLEASE LET ME PERISH, TOO!

n> The only comment I would add is that if one lived in Iraq right now,
n> one might think that this prediction had already come true.

And I predict in '93, you and I and the rest will be around to have a good
laugh over this one. Isn't it amazing how such uhhh, major prophesies always
seem to be 'revealed' only a couple of years ahead of the event? ;-)

Subject: Richard Hoagland's Face on Mars
Date: 4 Oct 91 11:40:08 GMT

To: ncar!wrs.com!davidj
Date: 4 Oct 91

In the following, I must add....

- >
- > In order to completely realize the possible truth of
- > the material presented
- > in his discussions, you should understand tetrahedral
- > geometry and it's
- abridged for sanity-----
- > addition, 12 is a fundamental aspect of this system.
- > Richard Hoagland used
- > two universal constants and their ratio, in order to
- > substantiate his claims.
- > These two numbers are pi (3.14) and e, the base of
- > natural logarithms
- > (2.72), and the resulting ratio: $e/\pi \approx 0.865$.

It's 2.718281828 with 12 mantissa points, so bear with me,
I do have a very sensible point to make with this figure.

- >
- > For instance. if you take the slope of the Great
- > Pyramid in Egypt, and
- > divide it by the 60 degrees, it's top angle, you get
- > 0.865. This is

No, that pyramid has a slope of 51.85, with the .85
from the 51 minutes (eg $51/60 = 0.85$), thus $51.85/60$
is equal to 0.8641666667, close but wait, there's more.

- > is equivalent to 687 Earth days. The Fibonacci spiral is a tetrahedral
- > mathematic. Follow the numbers and follow the logic.....
- >

I can't address that right now, we'll have to hit the
library at the college for that particular item.

- > The Egyptian Pyramids are made of calcium carbonate which has an internal
- > structure that is exactly like the structure of the pyramid (in Egypt) itself.

This holds some promise, I'll talk to the physical chemist
about this one. I can browse his books to verify this.

- >
- > The land forms found on Mars are NOT those done by Nature. The angles formed
- > by the pyramids are impossible for nature to create.

Whoa! What about the calcium carbonate molecules just

mentioned after the 20000 books written? I'm purposely trying to dump on this premise as I have read Sitchin's book, "The Twelfth Planet", and found it extremely interesting.

- > There are too many variations on the e/π constant. Even the latitude on
- > Mars where the city/ face/pyramid are found is a function of e/π .

This is quite a bit like Bruce Cathey's geomancy, which I also find to make no mathematical "sense" and I attribute much of this approach to the truncation/rounding-off errors that one might not suspect of hand-held calculators. While the numbers appear "close enough for government work", I do not accept the accuracy of such equipment for my own work, which includes engineering and physics homework of the last eight years of my life.

- > He spent several hours creating an exquisite mathematical trail showing that
- > the pyramid on Mars, the pyramid at Gizeh and, co-equivalently, the Sphinx in
- > Egypt, are all more than 200,000 years old. More specifically, about 217,000
- > +/- 15,000 years.

No doubt, it does appear close, I will admit, though I would expect more of a predominance of irrational numbers such as the square root of two to "go along with" π , e and the like.

- > It is impossible for me to go into all the details,

Yeah, I would write the same, guess I'll have to get the tapes of this event so that everyone can enjoy reading a "eating my words now" post from this humble physicist.

- > Carl Sagan and Richard Hoagland used to be friends. In public, Sagan says
- > that this information is nonsense, but in private, he says something quite
- > different.
- >

That's because Sagan has championed the cause of Science as a national goal of literacy. While that is to be admired in itself, Carl is something of an embarrassment to the scientific community for his lack of scientific/educational accumen with the phrase "billions and billions".

- > Richard indicated that he will read anything that will bring him even 1
- > data point closer to the Truth.
- >

Good! Send him this post, and that I would like to congratulate the both of you for such a thought provoking effort to examine some of the possibilities.

- > * COMING NEXT: My discussions with Wendelle Stevens
- > regarding Grey *
- > * aliens from the Reticulum Star cluster and
- > his playing of a *

> * cassette tape of the sounds of one of their
> space ships. *
>

Might I tell you about the sound being somewhat easily
fabricated on a polyphonic sampling keyboard?
Gas Music from Jupiter, indeed!

Subject: Doug and Dave
Date: 5 Oct 91 17:33:00 GMT

I was intrigued to see, in the Doug and Dave saga, that the pair were
reported to have been inspired in their UK crop circle hoax, by:- a)
(Time magazine 23/9/91) "... by reports of flying saucer
sightings, and recalling crop circles created by tractors by
Australian farmers several years earlier, they decided to flatten
some corn to make it appear that a UFO had landed." b) (my memory of a

TV item here) one of the pair being from Australia?
Naturally, we'd be interested to know more about the alleged Australian connection. So, has anyone come across further information on the Aussie link? We'd be happy to follow it up for everyone.
When most people outside of Australia, talk of "saucer nests" or "crop circles" they refer to the Jan 1966 discovery/report at Tully, Queensland. George Pedley, was startled to see a blue-grey saucer with no portholes, antenna or signs of life, rise from a lagoon area, making a hissing sound. It rose vertically at speed, slowed down at 20 metres altitude, then left to the south-west. Inspection of the area revealed a circle of dead reeds, floating on the lagoon surface, swirled in a clockwise direction and of 10 metres diameter. No satisfactory explanation has ever been forthcoming. An excellent outline of the case, written by Bill Chalker, is to be found in Story, R. (1980), "The Encyclopedia of UFOs", New English Library, pages 370-371, together with a small picture of the trace.
PS Thanks to Linda Bird for supplying a copy of the Time article.

To: Sheldon Wernikoff

I will put a copy of Pritchard's implant article in the mail today. Forget the costs. His paper does not deal directly with the Price case. My comments on that come from conversations with Dave. Basically what he was saying about the penile material was that its material construction was not dissimilar to either man-made or naturally-occurring materials on Earth, and therefore by itself cannot provide proof of alien technology. Other than that you should talk with him.

On another topic: The July MUFON J. issue has a letter from Paul Fuller criticizing an earlier letter from George Wingfield. In it Paul, a supporter of the Meadon wind theory for the crop circles, refers to your work creating '...repeatedly created ...five equidistant vortices...' in the lab. He says Meadon discusses your work in his latest book and Paul uses your's and Ohtsuki's results as support for Meadon's theory. I remember some discussion of this in Paranet. Have you published your results? Do you have something in writing that you could send me? Finally, do you really believe that Meadon's theory 'holds water'? Wind vortices could create some of the hundreds of circles reported but it seems unlikely to be the answer for all. Fuller refers to a bunch of circumstantial reports of observations of wind vortices creating circles 'in broad daylight'! Are these reports true and, if so, why haven't they been published somewhere? Of course, Meadon merely says that those circles that can't be explained by his theory (such as the pictograms) are hoaxes and now has the 60-year old hoaxers to 'prove it'. Fuller's point is that the phenomena has not changed that much through the eighties in that most of the circles are just that; also even multiple separate circles and concentric circles can be explained by Meadon's theory. Even that seems to be stretching the wind vortex theory. I look forward to your comments (or those of anyone else who wants to jump in). Dave

> If time was being manipulated on a localized volume
> of space to achieve
> certain effects (bending light, overcoming inertia, etc.),
> then the rest of the
> environment feels those effects.

Hi Korac,

Absolutely correct, but the range of the effects is open to dispute. It depends on how "localized" the time-field is and what is going on inside it (which determines what radiates from it). These are imponderables -- we can barely imagine such a technology, let alone predict its range or flexibility. We can, however, extrapolate some of its effects.

I'm fascinated by the soil samples, scorched asphalt, "sunburn", and "instant cataracts" left behind by these craft. But the difficulty seems to be in obtaining highly reputable samples and making sense of the effects. Some effects are highly tertiary, e.g.: human effects. The distinctive burns on the Cash/Landrum witnesses and on Stephan Michalek in Ontario only lasted 5-6 weeks, and we are left with secondard physiological effects: cancers, recurrent "stigmata", etc.

Still, we can get some idea of the processes involved by examining soil samples & plants, with their distinctive cellular breakdowns, stunted growth/gigantism, and the crystalline, hydrophobic nature of UFO-radiated soil.

I hear that one fellow has come close to duplicating the crystalline, hydrophobic soil of "genuine" UFO circles. After several months of trying different techniques, he simply "nuked" normal soil/humus in a microwave oven for about 2 hours!!! He got barren, crystalline, water-resistant soil incapable of recovering itself or supporting plant growth.

> be just speculating about fiction.

Right, exasperating, isn't it? Plus you commented later that no one has any expertise on the phenomenon -- there's a fellow out of Austin who has worked the theoretical end of this for 25 years. I'll make his equations available to you if you know some math/physics geeks who can take the time to analyse them.

Best,
Clark

Ah -- but what if gravity is a function of *time*???

Eg: what if mass is a function of time? Or matter itself, for that matter?

Best,
Clark

Hi Steve, pleased to make your acquaintance. I can't shed TOO much light on INSLAW and Dan Casolaro but it is a very interesting case. I agree: where there's light, there's often heat.

Have you seen this week's Village Voice? The feature article illuminates this very subject. Also I recommend checking the index to Barron's Financial Magazine for this year for an excellent sidebar on INSLAW and the court cases. The article appeared in Spring/Summer. Dow Jones has a good investigative team but they rarely stray into mainstream journalism. I think Alan Abelson may have written the article, but I don't have it handy & can't check just now.

Isn't Ed Meese a swell guy? The U.S. Attorney General who brought us Operation Sun Devil aids/abets/encourages software piracy by his cronies. Then he sabotages the program's true authors while he helps tout the product to secret police from Israel to So. Korea to the Tonton Macoutes. And the kicker: The Meeseware has a bug that lets the Justice [sic] Dept., CIA, and anyone else [who is properly equipped] dial into it and dump the system data from each secret police organization directly into their own computers.

Guess it's that *dang* New World Order thing. I'm old dog & have difficulty thinking in these imaginative new ways...

Watch yourself. My BBS: 201-451-5583, Fido 1:107/816.0.

Best,
Clark [not dead either]

PS -- Have you tried the Christics?

We are in the process of working out the logistics of this problem. In the meantime, mail your net message to <User.Name>@paranet.org. I will see that it is routed correctly while we get the system set up for this. Please do not mail to the fidonet.org address as all mail going there is very unreliable.

From the Rocky Mountain News, October 9, 1991, Page 30 ...

"As the first truckload of high-level radioactive waste brought to Idaho in more than two years was being unloaded Tuesday, American Indians joined the state's fight to bar more than 200 more shipments to Idaho National Engineering Laboratory. Shipments of radioactive waste from the decommissioned Fort St. Vrain nuclear plant in Platteville [Colorado] resumed Saturday, Tribal Council member Marvin Osborne said the Department of Energy was formally advised that future shipments will violate Shoshone-Bannock law until the government finances a hazardous-material transportation safety program on the Fort Hall Reservation. The main route to the Idaho lab cuts through the reservation."

So, on the map, this places the Indian reservation very near to Pocatello, Idaho. This story also verifies that the DOE is working to dump nuclear waste into a hole which could be our suspected site for the 0.0. I have contacted Peggy by voice and given her this information. At least part of the story is verified.
